Gourav Sarkar

Personal RAG Knowledge Base

Structured personal information for retrieval-augmented generation (RAG), personal assistants, profile Q&A, and context-aware responses.

Document purpose	Personal factual knowledge base
Primary sources	Resume + LinkedIn profile export
Prepared	August 2026
Data policy	Prefer source-backed facts; do not invent missing details

Important: This first version is based only on the two uploaded sources. Where the sources disagree, the disagreement is preserved instead of silently choosing a value.

1. Identity & Contact

Full name	Gourav Sarkar
First name	Gourav
Last name	Sarkar
Email	gouravdev246@gmail.com
Phone	+91-6295709446
LinkedIn	linkedin.com/in/gouravdev
GitHub	github.com/gouravdev246
Portfolio	gouravme.netlify.app (LinkedIn source)
Country	India
City	Siliguri (LinkedIn source)
Languages	Bengali, Hindi, English

2. Professional Identity

Current positioning

- Full-Stack Developer (MERN) focused on AI-powered products, vector search, LLM integrations, Redis, React, Node.js, MongoDB, and TypeScript.
- Resume positioning: full-stack developer with production application experience, strong backend and AI integration experience, and an interest in full-stack/backend engineering internships.
- LinkedIn headline: Full-Stack Developer (MERN) | Building AI-Powered Products — Vector Search, LLM Integrations, Redis | React · Node.js · MongoDB · TypeScript | Open to SDE Internships (Remote).

Professional themes

- Building and shipping deployed web products.
- Backend engineering and API development.
- AI integrations, embeddings, vector search, cosine similarity, RAG, and LLM APIs.
- MERN stack development.
- Cloud deployment, Docker, Redis caching, and database optimization.
- Currently deepening DSA, backend/system design, and TypeScript.

3. Education

University	Lovely Professional University (LPU), Jalandhar, Punjab
Degree	Bachelor of Technology — Computer Engineering
Duration	2025–2029
Resume CGPA	8.31 / 10
School	Dhupguri High School, Dhupguri, West Bengal

Higher Secondary	12th — Science Stream
12th percentage	85.2%
School duration	2023–2025

4. Technical Skills

Languages

• JavaScript, TypeScript, Python, C++

Frontend

• React.js, Next.js, Tailwind CSS, HTML5/CSS3

Backend

• Node.js, Express.js, REST APIs

Databases & caching

• MongoDB Atlas, MongoDB Vector Search, Redis, MySQL, PostgreSQL, Prisma

AI / ML

• Embeddings, cosine similarity, sentiment analysis, LLM API integration, Pandas, NumPy

DevOps & cloud

• Docker, AWS EC2, Vercel, CI/CD basics

Tools

• Git, GitHub, Postman, Razorpay API, Apify

Computer science

• Data Structures & Algorithms; System Design basics

5. Projects

UniRankers — Student Ranking & Networking Platform

- Stack: MERN, MongoDB Vector Search, Redis, Docker, AWS.
- Live: unirankers.vercel.app
- Student ranking platform scoring users across CGPA, LeetCode, GitHub activity, hackathons, and internships.
- Uses a nightly cron-based ranking engine.
- MongoDB Atlas Vector Search is used for personalized student/team recommendations.
- Redis caching is used to optimize leaderboard read performance.
- Includes team finder, mentorship panel, community feed, and admin moderation system.
- Containerized with Docker and deployed on AWS EC2.
- LinkedIn description additionally describes UniRankers as live for LPU students, with real users/signups.

ResumeToJob — AI Job Matching Platform

- Stack: MERN, AI embeddings, Razorpay.
- Live: resume-to-job-lac.vercel.app
- GitHub: github.com/gouravdev246/ResumeToJob
- AI-powered matching system using embeddings and cosine similarity to connect resumes with 100+ job listings.
- Apify web scraping is integrated for Internshala data aggregation.
- Razorpay payment gateway is used for premium features.
- AI-based resume analysis extracts skills using NLP.
- Uses MongoDB Atlas storage and portfolio-sharing functionality.

YT Analyzer — AI Video Insights Tool

- Stack: MERN, Llama-80B API, Pinecone, RAG.
- Live: youtube-frontend-beige.vercel.app
- GitHub: github.com/gouravdev246/youtube-backend
- Processes 500+ comments with 85% sentiment accuracy using the Llama-80B model API.
- Uses a RAG pipeline with Pinecone so users can conversationally query and chat with the video's content.
- Node.js backend handles concurrent requests.
- React frontend was optimized to reduce analysis time by 95%.

Additional projects mentioned on LinkedIn

- FreeTify — full-stack Spotify-inspired music platform with auth, playlists, uploads, MERN, Vercel + Render.
- LPUDeals — campus marketplace for 30,000+ LPU students to buy/sell textbooks, gadgets, and essentials.

6. Experience

2026	Full-Stack Developer — Personal Projects
2023–present	Local Guide — Google Maps (LinkedIn source)

7. Certifications & Programs

- Docker Foundations Professional Certificate — Docker, Inc.
- Redis + AI: Building a Vector Database with Redis — LinkedIn Learning
- Full Stack React — Infosys Springboard
- Python — HackerRank
- Hack Node India
- Deloitte Australia Technology Job Simulation
- Gradio Agents & MCP Hackathon 2025
- 3hr Workshop Certificate — Python
- SQL
- Digital Leadership in Business
- Learning Full Stack React

8. Public Profile / Network Data

LinkedIn public identifier	gouravdev
LinkedIn profile URL	linkedin.com/in/gouravdev/
Follower count in export	3,458
Open to work flag in export	false
Verification badge	false
Profile picture	Present in LinkedIn export

9. RAG Answering Rules

Use this section as behavioral metadata for the personal RAG system. The assistant should answer from retrieved source-backed facts and avoid fabricating details.

- When asked about Gourav's education, use the education section and preserve the exact source values.
- When asked about technical skills, group answers by language, frontend, backend, databases/caching, AI/ML, DevOps/cloud, tools, and CS fundamentals.
- When asked about projects, explain the project's purpose, stack, key technical implementation, and deployment details only when supported by the source.
- When asked about AI experience, emphasize embeddings, cosine similarity, vector search, RAG, sentiment analysis, and LLM API integration.
- When asked about backend experience, emphasize Node.js, Express.js, REST APIs, MongoDB Atlas, Redis, Docker, AWS EC2, and concurrent request handling where relevant.
- When asked about internships, the resume says Gourav is seeking a full-stack or backend engineering internship; the LinkedIn export's open_to_work field is false. Preserve this distinction.
- Do not claim employment at a company unless an experience entry explicitly supports it.
- Do not invent GPA, project metrics, users, revenue, employment, awards, or responsibilities that are not present in the source data.
- If two sources disagree, explicitly say that the sources contain different values rather than silently merging them.
- For questions requiring current information not present in this knowledge base, say that the personal knowledge base does not contain enough information.

10. Source Conflicts / Data Quality Notes

CGPA discrepancy

- Resume: CGPA 8.31/10.
- LinkedIn summary: CGPA 8.57 at LPU.
- RAG instruction: do not choose one silently. If asked, report the discrepancy or ask which value should be treated as canonical.

Location

- LinkedIn export lists city as Siliguri and country as India.
- Resume lists LPU in Jalandhar, Punjab and school in Dhupguri, West Bengal.
- These represent different location contexts and should not be treated as contradictory.

Internship / open-to-work status

- Resume summary says Gourav is seeking a full-stack or backend engineering internship.
- LinkedIn headline says 'Open to SDE Internships (Remote)'.
- LinkedIn export field open_to_work is false.
- These should be preserved as source-specific facts until the user confirms the intended current status.

11. Suggested RAG Chunk Metadata

For a production RAG pipeline, split this document into semantic chunks. Suggested metadata fields:

- person_id: gourav_sarkar
- source_type: personal_knowledge_base

• section: identity | education | skills | projects | experience | certifications | profile | answering_rules

• source: resume | linkedin_export | curated

• confidence: high | medium | needs_confirmation

• updated_at: 2026-08-12

End of current knowledge base. This document intentionally contains only information supported by the uploaded resume and LinkedIn export. More personal sections can be added later from additional source material.
